

COMPASS - CVP FOR SEPSIS MANAGEMENT

ASSESS YOUR SEPTIC PATIENT QUICKLY

Precise Pressure Made Simple.

Reclaim the lost minutes of the Golden Hour

Every hour sepsis treatment is delayed, the risk of death increases 7.6%. In just seconds, the sterile, disposable Centurion Compass provides a precise and quantifiable measurement of central venous pressure (CVP). It is ideal for assessing a septic patient quickly, confirming your decision on the best treatment pathway.

Eliminate the guesswork and untangle the complexity of sepsis management.

WITH SEPSIS, EVERY MINUTE COUNTS. COMPASS MEASURES CVP INSTANTLY.

Compass | CENTURION

The damaging effects of sepsis in the U.S. are staggering.

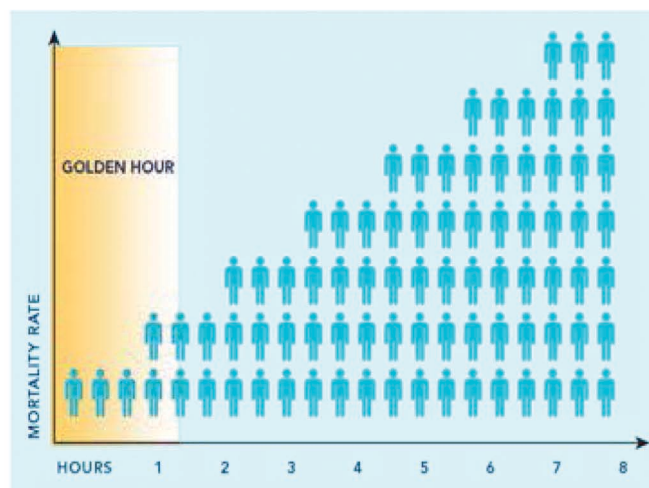

- Every year, 1.6 million sepsis cases fill U.S. hospitals.
- Every day, 700 deaths occur due to severe sepsis and septic shock.
- Every hour sepsis treatment is delayed, the risk of death increases 7.6%.

As of October 2015, all hospitals and long-term care facilities must report on severe sepsis and septic shock as a core measure for the Centers for Medicare and Medicaid Services' (CMS) pay-for-performance/financial incentive program.

Do your programs and outcomes ensure complete reimbursement?

Approximately 50-60% of your septic patients are already getting a central line. Compass makes obtaining CVP fast,

easy and affordable. Capillary assessments and cardiac ultrasounds require trained staff and produce variable results. Monitoring systems need transducer wire cabling to be set up, consuming valuable staff time.

Are you doing all you can to save lives and money?

Sepsis management made simple.

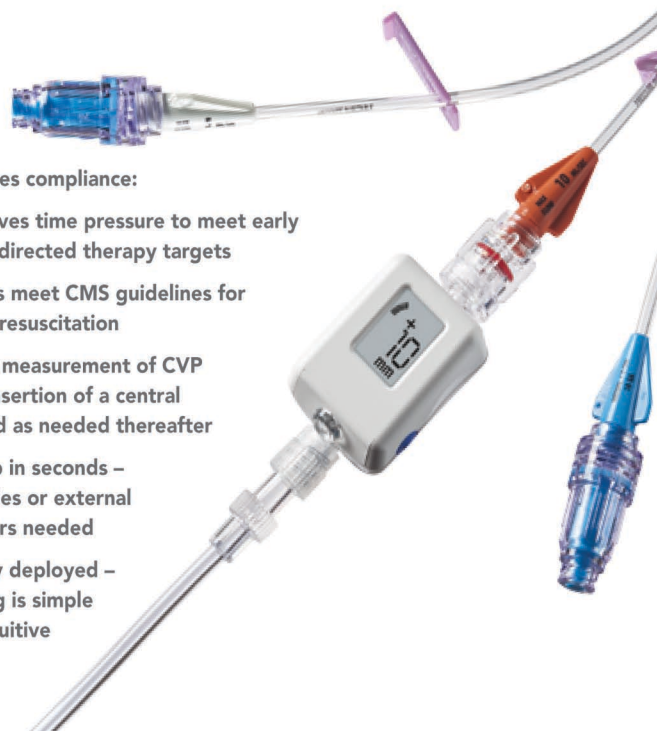

In just seconds, the sterile, disposable Compass can provide a precise, quantifiable and objective measurement of CVP. Insert the central line, connect the Compass and immediately read the CVP. No waiting for staff to hassle with overhead monitors, calibration, leveling or priming.

With Compass in place, a patient's CVP is not only measured instantly but monitored periodically as needed. Compass provides an objective, easily documented CMS value.

Good for you, great for your patients.

Compass: Precise Pressure Made Simple.

- **Increases compliance:**
 - Relieves time pressure to meet early goal-directed therapy targets
 - Helps meet CMS guidelines for fluid resuscitation
- **Allows measurement of CVP** after insertion of a central line and as needed thereafter
- **Sets up in seconds –** no cables or external monitors needed
- **Rapidly deployed –** training is simple and intuitive
